

{ Laundry Soap }

*Recipe courtesy of
Virginia Soaps and Scents*

Ingredients:

- ~ 4½ ounces of “Virginia Soaps & Scents” Cleaning Soap
- ~ ½ cup washing soda
- ~ ½ cup borax powder
- ~ grater
- ~ You will also need a bucket, 3-5 gallon size

Directions:

1. Grate the soap and put it into a large sauce pan. Add 6 cups of water and heat until the Cleaning soap melts.
2. Add the washing soda and the borax. Stir until the mixture is dissolved. Remove from heat.
3. Pour 4 cups hot water into the bucket. Now add your soap mixture and stir.
4. Add 22 cups of water and stir (22 cups = 1 gallon plus 6 cups).
5. Let the soap sit for about 24 hours and it will gel. You use ½ cup per load.

Note: The finished soap will be in a gel form. It is a low-sudsing soap, so is great for front-loading washers as well as the top-load variety.
